Introduction

The State of Kansas received a state planning grant in 2000 to pursue a project entitled “Finding and Filling the Gaps: Developing a Strategic Plan to Cover all Kansans.” As part of that effort, in 2001 the state of Kansas conducted a statewide telephone survey in order to provide detailed information about rates of health insurance coverage among geographic, occupational, economic and ethnic subgroups within states. One objective of the survey was to determine population segments where progress toward improved rates of health insurance coverage might be achieved. The findings of the telephone survey proved to be a very valuable resource, as rural and agricultural areas are very different from the urban context of large cities, and there is considerable evidence that race, ethnicity and a variety of occupational factors are associated with insurance coverage. If an incremental, targeted approach to solving the problem of uninsurance is to be effective, it is imperative to learn more about health insurance coverage in various parts of the state, and for various population segments. Those findings were reported in a previous volume, “The Kansas Health Insurance Study” by R. Paul Duncan, Colleen K. Porter and Cynthia Wilson Garvan, August 2001. Having identified some of those “gaps” in coverage in the 2001 survey, subsequent additional studies have been designed to explore some sub-populations at risk of uninsurance in greater detail, including a survey of small businesses in 2003.

A key finding from the 2001 survey concerned the role of individually purchased health insurance. At the national level, about 9.1% of insured people obtain their health insurance through an individual purchase mechanism.¹ For the most part, this reflects a circumstance in which there is no opportunity to obtain employer sponsored health insurance; either the individual is not employed, the employer does not offer health insurance, the employee is not eligible or some similar situation exists. In Kansas, the 2001 survey indicated that 11.2% of Kansans have individually purchased health insurance, with that rate climbing to 20.6% for those living in the sparsely populated “frontier” counties of northwest Kansas. Those numbers were significant enough to encourage further investigation about the dynamics and values of people in that situation.

In 2006, a follow-up survey was initiated, focusing detailed additional data collection on Kansans who obtain health insurance by individual purchase. The goal was to measure their opinions on some of the same policy options and learn more about their health insurance circumstances and changes in coverage across the five-year period. This study employed a method of phoning back non-urban households that had reported individually purchased coverage in 2001.

Information regarding the methodology of the follow-up telephone survey and resultant findings are provided in this report. It is recognized that additional analyses of the data resulting from the survey will further inform policy participants and other interested parties as they seek to increase health insurance coverage for the state’s residents, and thus detailed technical specifications for use of data derived from the telephone survey is provided in Appendix B.

Methodology

Instrumentation

Wherever possible, the instrument was kept identical to the 2001 questionnaire, in order to provide the most parallel comparison possible. Changes were made to the beginning of the questionnaire, in order to screen for the same household as in the 2001 survey. A series of questions about policy initiatives, which had been used in the previous survey of small employers, was also added to the instrument. In order to make up for the extra time required for the screening and new policy questions, some items were dropped; in particular, utilization information for a randomly selected child in each household was not included in the 2006 survey. The survey instrument is provided as Appendix A.

Data Collection

The telephone fieldwork was conducted by the Bureau of Economic and Business Research (BEBR) at the University of Florida at Gainesville under the direction of Dr. Chris McCarty.

The fieldwork began in May 2006 and was completed by the end of July 2006. A total of 208 interviews were conducted. The average length of the interview was just over 15 minutes. All interviews were conducted in English (there was a contingency plan to conduct interviews in Spanish if needed, but no language barriers were encountered for this sample).

The center used a computer-assisted telephone interviewing (CATI) system to speed the delivery of clean, machine-readable data following completion of the fieldwork. Most interviewers were undergraduate students. Interviewers represented a wide range of ethnicity, gender, and race categories.

Sample Design and Implementation

The 2001 survey estimated rates of uninsurance for Kansans under age 65. Thus the sample for the 2006 follow-up study, designed to track changes over time, included individuals age 69 or younger, to retain everyone from the 2001 survey.

In order to focus on Kansans in non-urban areas, households in Regions 5, 7, 8, 9, and 10 of the 2001 sample design were considered, including only households which had reported at least one person with individual coverage in 2001. Thus 509 households fit these criteria.

The survey was complicated by the fact that a new telephone area code had been introduced in the southern part of Kansas after the 2001 sample had been drawn, requiring all phone numbers in the affected area to be attempted with both the old and new area codes.

In order to be eligible for the 2006 survey, there had to be at least one person in the household who was living at that phone number in 2001, and there had to be someone at least 18 years old and able to respond to questions by telephone.

Regions for the 2001 Kansas Health Insurance Study

Survey Response

Of the 509 households that were dialed, the final disposition of cases was as follows:

| | |
|---|-----|
| Completed interview | 208 |
| Refusal, Break-off | 83 |
| No answer, Busy, Answering machine | 43 |
| Fax/data line, Nonworking, Disconnected | 108 |
| Callback never reached | 17 |
| No eligible respondent (e.g. all residents too young) | 4 |
| Not same household as 2001 | 45 |

The sample of 207 households includes 420 individuals. The findings noted below and in many of the tables refer to various subsets of these 420 people.

Considerations in Data Interpretation

Users of these data should bear in mind that the sample design had specific objectives, and due caution should be taken when the data are used for purposes other than those objectives. This survey was intended to describe the insurance status of individuals in non-urban households with a history of individually purchased coverage, and to track changes over time. The sample is **not** intended to provide estimates of the proportion of Kansans who lack insurance coverage.

In creating the tables in this report, design weights from the 2001 survey were applied which reflect the probability of selection into the original sample frame. For all Tables, the number of cases reported is the unweighted number of individuals to which the table refers. The percentages reported within the Tables are based on weighted cases.

Key Findings

Study findings include the following:

- When asked about the specific sources of coverage, about half of the individuals in the sample (49.2%) had individually purchased coverage, while a third (34.1%) had employment-based coverage and 7.2% were uninsured.
- Fewer than half of the individuals (42.2%) had more than one source of coverage.
- When sources of coverage for the two surveys were compared, the largest group was those who had individual coverage in both surveys (47.5%) followed by those who had individually purchased coverage in 2001 but now had another source of coverage (29.6%). About 12.8% had non-individually purchased coverage in both surveys, while 3.1% had individually-purchased coverage in 2006 but another source of coverage in the 2001 survey.
- Looking at changes in insurance status overall, 61.6% reported the same status as in 2001, while 32.7% stayed insured, but with a different source of coverage. About 4.8% of those who had been covered in 2001 were now uninsured. Fewer than a single percentage point (0.9%) reported moving from uninsurance in 2001 to current coverage.
- Among those without health insurance, the most common “main reason” given was overwhelmingly cost, cited for 73.6% of uninsured individuals, while another 13.8% reported medical problems or pre-existing conditions. Among those without current health insurance coverage, a majority (59.4%) had been without coverage for more than 2 years. About 18.2% had been without coverage for 1-2 years, and 1.9% had been without coverage for less than a month. About 18.4% of the currently uninsured had been enrolled in Medicaid at some time in the past.
- Among those currently insured, the vast majority (98.4%) had been insured throughout the entire previous year, with only 1.6% having at least one gap in coverage.
- In those households with a history of individually purchased coverage, most employees are not offered coverage by their employers. About 58.4% work for employers who do not offer health insurance to any employees, while 4.9% do not qualify for an employer-sponsored insurance plan. Another 26.3% enroll in employer-sponsored coverage, while another 8.5% decline the coverage offered by their employer.
- The rate of offers of employer-sponsored health insurance increase as firm size increases, consistent with other studies. Among those working for small employers with 4 or fewer workers, only 11.8% are offered coverage, while 93.7% of those working for firms with 100 or more employees are offered employer-sponsored coverage.

- Overall, 8.2% of respondents said they had delayed getting needed medical care in the last year. But the rate was three times higher among the uninsured (32.9%) and lowest (5.2%) among those with non-individually purchased coverage, which includes employer-based coverage.
- Out-of-pocket costs are highest among the uninsured: 64.6% of the uninsured report paying more than \$40 at the time of a doctor's visit, compared to 37.2% for those with individually purchased coverage and 15.7% of those with other sources of coverage.
- Reported monthly premiums for individually purchased coverage ranged from \$5 to over \$3,000 per month. The median was \$324, and the mean \$394.
- On the policy issues, more than half of respondents (63.7%) agreed or strongly agreed that individuals and families are responsible for their own health insurance coverage. Over three-quarters (82.2%) agreed or strongly agreed that employers should offer health insurance to their employees, while over two thirds (69.5%) agreed or strongly agreed that employers should help pay for employees' family coverage.
- Kansans were divided about the role of government in providing health insurance. About half (51.2%) disagreed or strongly disagreed that health insurance should be provided by the government, but 15.1% refused to agree or disagree, and 28.5% agreed or strongly agreed with the statement. However, just over half (51.2%) agreed that the government should help low-income Kansans to pay their health insurance premiums, with another 16.0% strongly agreeing; 19.5% disagreed or strongly disagreed with low-income premium assistance.
- On possible interventions to assist small businesses, respondents overwhelmingly thought that small businesses should be able to join with other small businesses to buy health insurance on terms similar to large Kansas firms; 61.5% agreed, with another 34.0% strongly agreeing and only 1% disagreeing. Almost three-quarters (73.0%) also agreed or strongly agreed that small businesses should be able to purchase health insurance through a large government health insurance plan such as the Kansas state employees health plan.
- More than half of the households in the sample (53.4%) had at least one person in the household with individually purchased coverage. Within those households where at least one person currently has individually purchased insurance, 83.6% of individuals report the same source of coverage, reflecting low rates of intra-household variation.

- A profile of non-urban Kansans with individually purchased health insurance showed the following:
 - Of those with individually purchased coverage, about 18.6% are children under 19 years old, 4.7% are young adults age 19-30, just over a third (36.5%) are working-age adults 31 to 55 years, and 40.2% are 56 to 69 years old. This may reflect the high rates of uninsurance among young adults observed nationwide and the perceived need for health screenings among those who are middle-aged or older.
 - Most people with individually purchased coverage are in middle incomes, with 43.3% in households with annual family income of \$35,000 to \$64,999 and only 2.4% in households with family income of less than \$15,000.
 - Among adults with individually purchased coverage, 44.2% were exclusively self-employed, with 11.1% working for an employer part-time, 13.7% working for an employer full-time, with 30.7% out of the workforce or unemployed.
 - Most adults with individually purchased coverage are married (73.9%) with 17.7% never married and 8.5% widowed, separated, divorced, or living with a partner.

KANSAS HEALTH INSURANCE STUDY
2006 Follow-up Survey

(HELLO) Hello, this is _____, calling for the University of Kansas.

*INTERVIEWER: PRESS 1 TO CONTINUE WITH SURVEY
PRESS CTRL/END TO TERMINATE CALL*

Hello, this is _____ for the University of Kansas. We started an interview a few days ago about health care and health insurance and I'm calling back to complete that interview. May we begin?

(HELLO2) When Kathleen Sebelius was state insurance commissioner, she began a research project to learn about the health insurance coverage of people in Kansas. Back in 2001, the household at this telephone number participated in the survey, and the person we spoke with said that we could call back later. We would like to ask some more questions.

(USE AS NECESSARY –

**This is not a sales call; we are only interested in your opinion*

**YOU CAN TELL THEM YOU ARE WORKING FOR THE UNIVERSITY OF
FLORIDA'S BUREAU OF ECONOMIC AND BUSINESS RESEARCH
WHICH WAS HIRED BY THE STATE OF KANSAS)*

**YOU CAN PROVIDE THEM WITH A WEBSITE FROM THE STATE OF
KANSAS WITH INFO ABOUT THE 2001 AND 2005 SURVEYS*

INTERVIEWER: PRESS 1 TO CONTINUE

(HOUS) Were you or anyone in your household living at this telephone number in (month of interview) 2001?

- 1 YES
- 2 NO—close and thank

(RESP11) When we spoke with your household before, we talked to a (SEX) with a first name or initials of (HHLID), who would currently be about (AGE+5 or AGERNG+5) years old. Does someone of that description still live there?

- 1 YES—go to RESP2
- 2 NO—go to ADLT

(RESP2) May I speak to (HHLID)?

- 1 Person on phone—go to PROCEED
- 2 Respondent comes to phone—go to RESP4
- 3 Different person comes to Phone—not the respondent—go to HELLO
- 4 Respondent is impaired/permanently unable to do interview—go to ADLT
(INT: If respondent is not home—PRESS CTRL/END AND CODE AS CALLBACK)

(ADLT) We would like to do the survey with an adult in your household. Are you 18 years old or older?

- 1 YES, 18 YEARS OLD OR OLDER—go to *KNOW*
- 2 NO, UNDER 18 YEARS OLD—go to *ADLTB*

(ADLTB) May I speak to someone 18 years old or older who lives there?

INTERVIEWER: PRESS 1 IF INFORMANT PASSES PHONE TO ELIGIBLE ADULT—go to RESP3

IF NO ELIGIBLE ADULTS, PRESS CTRL/END AND CODE AS “NO ELIGIBLE RESPONDENT”

IF ELIGIBLE ADULT IS NOT HOME, PRESS CTRL/END AND CODE AS CALLBACK

(RESP3) Hello my name is _____. I’m calling for the University of Kansas.

When Kathleen Sebelius was state insurance commissioner, she began a research project to learn about the health insurance coverage of people in Kansas. Back in 2001, your household participated in the survey, and said that we could call back later. We would like to ask some more questions.

First I need to know if you are 18 years old or older.

(INT: If yes, PRESS 1—go to *KNOW*
If no, PRESS 2—go to *ADLTB*)

(KNOW) Are you the most knowledgeable person in your household about the family’s health care and health insurance?

PRESS 1 IF YES—go to PROCEED
PRESS 2 IF NO—go to KNOW2

(KNOW2) May I speak to the person who is most knowledgeable?

PRESS 1 IF YES—go to RESP4

IF THEY REFUSE, THANK THEM FOR THEIR TIME, QUIT OR HIT CTRL/END AND CODE AS A REFUSAL.

(RESP4) Hello my name is _____. I’m calling for the University of Kansas.

When Kathleen Sebelius was state insurance commissioner, she began a research project to learn about the health insurance coverage of people in Kansas. Back in 2001, your household participated in the survey, and said that we could call back later. We would like to ask some more questions.

(INT: PRESS 1 TO CONTINUE)—go to *PROCEED*

(PROCEED) Before we begin, let me tell you that only your first name or initials will be used to ensure confidentiality. You do not have to answer any question you do not wish to answer. This interview should take approximately 15 minutes to complete.

(May we proceed?) (INT: IF NO, HIT CTRL/END AND CODE AS REFUSAL.
IF YES PRESS 1 TO CONTINUE)

(INT: USE IF NECESSARY:

“This study is sponsored by the State of Kansas who hired the University of Florida’s Bureau of Economic and Business Research to conduct the survey. The results will be used to help state leaders develop better health care programs for people in Kansas.”

Section 1 Household Listing and Health Insurance

(FAMLI) For the interview we conducted in 2001, the following individuals were included in the household listing. Can you tell me if each of these people is still there?

Appendix B

Data Dictionary

For Use

There are four items needed to access the 2001 KHIS public use data sets:

- Person level data file (**pson06client.sas7bdat**)
- Data dictionary for the person level data set
- 2006 Survey Questionnaire (Appendix A)

pson06client.sas7bdat is a comma delimited ASCII file. The first row of each file contains the variable names separated by commas. The length of each variable name is constrained to be 8 characters or less. **pson06client.dat** has 420 data records which correspond to all persons under age 70 residing in the households that participated in the 2006 Kansas Health Insurance Survey. Missing values within a data record are indicated with a “.”. The variable “**ID_NO**” serves as a household identifier and link between the 2001 and 2006 data sets. Each of the 420 data records is uniquely identified by the combination of household identifier (**ID_NO**) and person number within the household (**pson_id**).

pson06client.sas7bdat contains 118 variables. The *Data Dictionary* documents the correspondence between the *Survey Questionnaire* and the data file. The variable names are listed along with the following:

- 1) the page number in the Survey Questionnaire,
- 2) the possible levels (or values) of the data element, and
- 3) a description of the variable (usually the survey question).

In the modified 2006 KHIS Telephone Survey Instrument provided in Appendix A, the variable names are included with the corresponding survey question. Users may find it helpful to consult the questionnaire in order to understand the actual question wording, order, skip patterns, and the like.

Important Cautionary Notes

In all analyses of these data, it is important for users to bear in mind that the sample design had specific objectives and due caution should be taken when the data are used for purposes other than those objectives. Specifically, the survey was intended to describe the insurance status of those in households with a history of individually purchased coverage, and to track changes over time. The sample is not intended to provide estimates of the proportion of Kansans who lack insurance coverage.

Some questions were asked only once per household. These include questions on health care utilization (USRCE, KPLACE, ERUSE, DRUSE, DELAY, COST) as well as the items that ask about opinions regarding policy options (P1 through P7) as well as the household income item.

These items were asked only of the survey respondent. In a few cases, the survey respondent is not included in the dataset since the respondent was older than 69 years and thus these items may be missing for the household.

Some questions have levels that include -8 (Don't Know) and -9 (Not Available). For these items, it was appropriate to ask the question, but the respondent either could not or would not provide an answer. The data file contains "." to denote where data are missing because the question did not apply to that individual.

Appendix C

RESPONSES to "Is there something that I haven't asked you about your family's health care that you think is important for us to know?"

| |
|--|
| Great if we could get insurance for Jim, but I don't know were to go since he is so sick and I can't get him even to get a doctor |
| Insurance costs too much. |
| I have self employment I pay a huge premium with self employment 350 for my self only it is a ridiculous price. |
| I'm insured poor. I have to have health insurance. I live in Bourbon County. We have high taxes. We are the welfare capital. We have to go out there and make ends meet and it's very unfair. we had a business and we had health insurance through our business...I called this insurance company and they said that they could blackball me and deny me coverage unless I got the same insurance coverage. And Medicare part D is a big mess. |
| It should be affordable, insurance companies need to be responsible and does not believe in gov taking care of our health |
| Wishes the bills would be easier to understand. Billing reports from the hospital and the insurance company have discrepancies. Some clinics don't even tell you what they are charging you for. Not right for insurance companies to dictate what doctors you can and cannot see. |
| Unfair the way insurance company decided if you will receive care or not. |
| Every insurance company has some sort of glitch in their process. Resp.'s provider won't pay for the blood work at a cancer center; they dictate where you have to go. |
| I think the insurance is high for the common person. I have to work two jobs but I am not sure what the answer is costs have gone so high my prescriptions go up every time I get them filled. I wish Governor Sebelius could do something, but I am not sure what I also have a beef if you go into the doctor they run all these tests as if they are covering their butt for a lawsuit but I can live with it. |
| Her husband has just began Medicare part B and he has not used it yet, but from what she can read it does not seem like a good coverage. |
| The gov't has mandated that resp. has to pay for a drug coverage supplemental policy, even though he doesn't need it. The money is wasted, until resp. actually needs drugs. |
| The only thing is I have arthritis & allergies& high blood pressure from a heart murmur & I couldn't get insurance -just small things but I was a poor risk I could get it but it would cost \$1000 a month. Finally I just told them I needed it & I couldn't afford it when he went off the program-When he went on Medicare we had been on BlueCross & Blue Shield for 35 years & finally they found a plan I could afford but if I had any claim the premium would double so I was very careful when I went to the doctor what do other people do. |

| <p>By the time you get to 58 or 60, you cant work a hard job and its hard to afford insurance and my broken ankle cost almost \$30,000 dollars, and that's from stepping off a step wrong----\$10 thousand to doctor 10 thousand to hospital an ambulance it was badly broken had to have surgery but still it was an accident</p> |
| <p>We couldn't afford it if Ron was working for Excel and he's getting to retirement age and we are wondering what we are going to do.</p> |
| <p>There's seems to be discrepancy between what our insurance provider is willing to pay and what the medical facilities charge and we get caught in the middle and end up having to pay it</p> |
| <p>We asked a lot about everything BUT health care--for instance, they have no one in their town who accepts United Health Care, which is very well-known. Must go an hour away.</p> |
| <p>Upset about paying \$300 for prescriptions a month--wondering if they'll be able to eat--and everyone--middle-class, college kids, elderly, in line paying for Rx--prices for drugs and doctors are ridiculous--gov't or insurance should do something. And need dental coverage.</p> |
| <p>Get jobs for people where guys can afford this stuff. Back in the 50s after WWII, a guy could around here, buy a house, buy a brand new house, children, and the taxes paid for children to go the city. It was a win/win situation. It isn't like this anymore.</p> |
| <p>Someone ought to do something about group D. It very confusing for the majority of elderly people.</p> |
| <p>I don't think your insurance should override your doctor when it comes to prescription medication. That drives up the cost at the clinic level.</p> |
| <p>I have a son who is obese and I don't understand why the insurance refuses to pay for the surgery that would correct this problem.</p> |
| <p>Paying \$600 a month for prescriptions, and she's thinking of not taking them, if she dies early - so what</p> |
| <p>Rates are raised every 6 months by \$60, doesn't know how much longer he can keep it up.</p> |
| <p>#1 - If we had limits of liability, healthcare costs would be cut in half. #2 - Individuals who pay for their own healthcare are not just paying for themselves, but for about 1.5 other people.</p> |
| <p>Is impressed with prescription drug plan, it is very helpful.</p> |
| <p>Need a better way to figure out Medicare part D, it's too complicated.</p> |
| <p>Income doesn't go up like expenses do</p> |
| <p>Aggravating to feel you can't go to the doctor because deductible is so high, but have to keep deductible high to keep premiums down monthly. And medical costs are going up--is that because of the uninsured who can't pay bills? They have BC/BS--they pay, do write-offs.</p> |
| <p>Of the 2 adult children, one has insurance and the other doesn't. The one who does works for a very large company and the one who doesn't works for a local hotel. It would be nice if those who are on KPERS could get on that Kansas State Employees Program--the one that I don't know anything about I can tell you my husband works part time just to pay for the insurance KPERS he retired in 95 with the proviso he would get a cost of living increase to keep up with inflation and we have not seen one in 10 years what</p> |

|---|
| Takes big part of income, didn't know it would be so expensive 10 grand a yr. holy cow. It's nuts. HC to expensive, don't blame it on insurance. |
| I would like to see seniors like my mom who don't get a lot of money taken care of and something where employers get families get coverage without it being outrageous. A single person does Ok but families have several hundred dollars out of the paycheck per month. Insurance costs are outrageous. A lot of waste in the system. Insurance companies are getting difficult and hospital costs are too high. We now have a lower blue cross policy to keep it. Accidents are more common for young people. I think drug companies lie. |
| It's too high. All health insurance is high |
| From ages 60-65 health insurance becomes very difficult |
| Before I got Medicare, I always carried my own insurance for my family. I don't believe in and never had my employer pay for my insurance. If I did it, everyone can do it. Just have to make choices. Can't booze it up. It has to do with responsibility of you are on low income. |
| Wish we had better coverage for dental. We have no dental. Ours is just a basic plan and \$2000 deductible -(together) and that's hard for us to come up with- no vision -I wish there was something more for farmers -they fall through the cracks. My daughter and her husband farm and they can't get insurance. They have a son who has problems and they can't get his medication -he needs it bad- they work their butts off and I know there are a lot of people who don't work so they can get health care that is a problem for me |
| I think preventative health care should be emphasized because it eliminates problems. I don't think we teach people about diet and nutrition anymore and it's so important. I think women are not taught how to cook and plan a good diet and that's why children are obese, they are not eating fruits and vegetables and we don't exercise enough. I think part of this is because our jobs don't require exercise, so we need to find a way to do productive exercise. It's better to take care of a yard or walk a dog, not just walk |
| I think insurance for the state of Kansas, they're puppets they don't do anything |
| More of the specialized care, for women's annuals and mammograms and that needs to be more important. Also need to be like well care situations. I don't think they are emphasized as much, I think most people just go when they are sick. It cost me 1000 out of pocket for a mammogram, unless you have permission from current care giver it costs more, a lot of people just can't afford to go, same thing as a colonoscopy, preventive medicine is important. |
| Make it affordable for everyone. It is a crime to go without health insurance. |
| I know that some insurance programs don't pay for office calls, and ours is set up on 70/30 instead of 80/20, and it could be 80/20 like most other ones. Other than that, it's hard b/c we have to get it ourselves b/c self employed, and we farm and there's no money in that. |
| I think that medical costs are very high now. I don't know the entire reason on it, I think tests that are run. I think medical costs are very high. Prescription costs also. |
| I think we need to get a handle on rising health insurance costs. |
| Our family has a bad attitude about health insurance. You pay forever and when you need it, it isn't there for you. I was tempted to say we don't believe in health insurance. |
| Know why I'm not working? |

| |
|---|
| I think all health insurance are expensive. Insurance companies are cutting down on coverage and not adjusting the premiums accordingly. |
| I believe elderly people that work all of their lives, there ought to be something to help with their healthcare and medication. I believe that premiums for health care are outrageous. |
| It's high. |
| Health care insurance is overpriced. |
| People who are self employed get screwed big time. The only time it works is if you have to go to the hospital, bigger deductible, no insurance card for medicine |
| Medicare doesn't do anything for dental work--need dental work, eye check-up, and BC/BS doesn't cover it either. Two sons and families--farm pays \$1077. Monthly for health insurance. Deductibles are high, \$1000, except for 1, who has Medicare, and it keeps growing. |
| I think you should ask people how much of their income they are spending on health insurance. |
| When you're talking about insurance premium (520/mo) WE HAVE A REALLY HIGH DEDUCTIBLE, like 2500 per individual. |
| Do not like managed health care; you can't go to a dr. of your choice whenever you want. |
| About the only thing I can say is we are very fortunate to have health care. It's a world wide problem. Nobody seems to know how to fix it |
| Health care is huge part of our economy. We worry about cost and quality. It's still the best health care in the world. But it involves the most important things; our families and our lives. I think if we could put the patients and the people in charge, that would be an important part of the thing I think deductibility of non- elective health care costs (don't give deductions to plastic surgery) only something that treats a diagnosed disease. All non elective, medically advisable. If those costs were.. |
| She tried to switch health insurance... and they were going to deny her insurance... because she has a previous condition ... and she doesn't think is fair... because it was a very normal procedure. She doesn't understand why people like her wont quality. |
| He changed health carriers- there's a big difference in quality and price, just because you pay more doesn't mean you get the same care-you have to shop around |
| Prescription coverage is much needed--more than %10 or %15 off. |
| Thinks it's all too expensive. |
