In 2016, Arkansas adults with less than a high school education were more than 3 times as likely as those with a Bachelor’s degree or higher to skip needed care due to cost.

28.7% of adults with less than a high school diploma
7.8% of adults with a Bachelor degree or higher

15.6% of Arkansas adults had less than a high school education in 2016.

14.1% of U.S. adults had less than a high school education in 2016.
