In 2016, Florida adults with less than a high school education were more than 2 TIMES as likely as those with a Bachelor’s degree or higher not to have a personal doctor.

39.8% of adults with less than a high school diploma
18.5% of adults with a bachelor degree or higher

13.9% of Florida adults had less than a high school education in 2016.
14.1% of U.S. adults had less than a high school education in 2016.
