

## A STATE-LEVEL LOOK AT FLU VACCINATION RATES **AMONG KEY POPULATION SUBGROUPS**

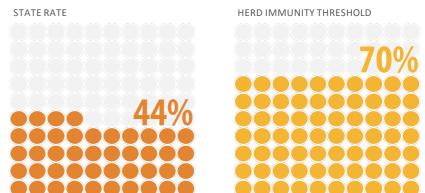

SHADAC's analysis of 2017-2019 Behavioral Risk Factor Surveillance System (BRFSS) Data.

## **Rhode Island**

Though there is no consensus on one singular figure needed to achieve what is commonly known as "herd immunity" (i.e., sufficient levels of COVID vaccinations in order to achieve protective population immunity) scientists and researchers have generally agreed on a range of 70-90% of the population being vaccinated. For simplicity, we use the lower end of the target range (70%) as a comparison for these state profiles.

Using data from the U.S. Centers for Disease Control and Prevention's (CDC) Behavioral Risk Factor Surveillance System (BRFSS) survey, these profiles give a deeper look into flu vaccination rates across the states among U.S adults (age 18 +) as a proxy to identify population subgroups that may be harder to reach with a COVID-19 vaccine

### State Flu Vaccination Rate vs. COVID-19 Herd Immunity Threshold

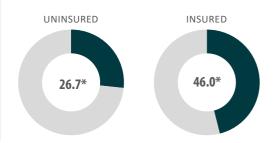

#### Flu Vaccination Rates by Race/Ethnicity

#### Flu Vaccination Rates by Insurance Status

#### Flu Vaccination Rates by Household Income

#### State vs. National Adult Flu Vaccination Rates

**7 STATES** 

had flu vaccine rates significantly below the U.S. rate.

**27 STATES** and D.C. had flu vaccine rates significantly above the U.S. rate.
