## State-Level Inequities in Children's Health Insurance Coverage

SHADAC Analysis of 2016-2020 American Community Survey Data

**New Mexico** 

While health insurance is important for all people, it confers particular benefits to children providing a gateway for health care to help kids grow into healthy adults. Fortunately, the U.S. has made substantial progress toward increasing the number of children with health insurance over the recent decades, and kids are now much less likely than adults to be uninsured. However, deep disparities remain in children's health insurance rates.

Using 2016-2020 data from the U.S. Census Bureau's American Community Survey (ACS), SHADAC has produced state-level estimates of children's uninsurance rates by demographic groups. These can be used as a tool to identify health equity gaps and to develop policies and initiatives to ensure children have access to health insurance and health care.

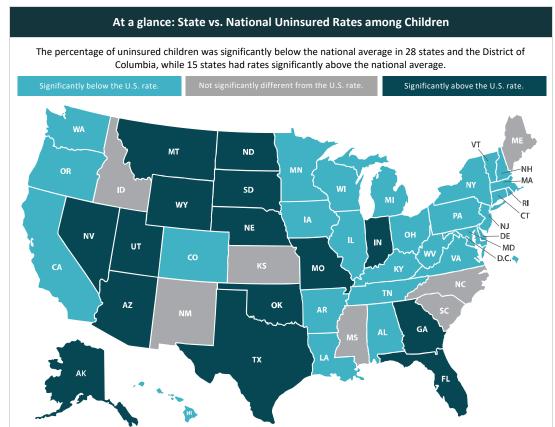

# 5 out of every 100 children are uninsured, or approximately

3,643,900 children

5 out of every 100 children are uninsured, or approximately

**25,300 children**
