Housing affordability is a social determinant of health. A lack of affordable housing contributes to housing instability and homelessness, both of which are strong predictors of higher health care costs and poor health outcomes, among others. Many states—especially those with high housing costs and large numbers of low-income residents—face housing affordability challenges. Unaffordable Rents, a new measure on State Health Compare, provides six years (2012-2017) of data on the percentage of rental households that spend more than 30% of their monthly income on rent, both at the national and state level, including breakdowns for Medicaid enrollment, non-white/white, disability status, and household income.

**AMONG RENTAL HOUSEHOLDS WITH:**

- **46.4%** of rental households in Nevada had unaffordable rents in 2017.
- **63.5%** had unaffordable rents in 2017.
- **53.1%** had unaffordable rents in 2017.
- **48.0%** had unaffordable rents in 2017.
- **89.2%** had unaffordable rents in 2017.

**USING MEDICAID TO ADDRESS HOUSING INSTABILITY AT THE STATE LEVEL**

States have the flexibility to use Medicaid funds to help provide housing support services for individuals with disabilities, older adults needing long-term services and supports, and individuals experiencing chronic homelessness. Medicaid can be used to provide services to support individuals’ housing transitions, to help individuals sustain their tenancy, and to develop strategic housing collaboratives. These services can be reimbursed through Medicaid demonstration waivers and Medicaid state plans.

**Breaking Down Unaffordable Rents in Nevada**

**AMONG RENTAL HOUSEHOLDS WITH:**

- **A Medicaid Enrollee:** 63.5% had unaffordable rents in 2017.
- **A Person of Color:** 48.0% had unaffordable rents in 2017.
- **A Person That Has a Disability:** 53.1% had unaffordable rents in 2017.
- **An Income Less Than $25,000:** 89.2% had unaffordable rents in 2017.

**Notes:** Unaffordable rent is defined as spending more than 30% of monthly household income on rent. Medicaid households are defined as households with one or more Medicaid enrollee. Differences described in this analysis are statistically significant at the 95% confidence level unless otherwise noted.

**THE MEASURES THAT MATTER SERIES**

This infographic is the second in a series highlighting measures available from State Health Compare, a resource states can use to better understand trends in health and health care in their state and compare those to other states and the nation. The previous infographic in the series, Education Matters, highlighted the role education plays in inequities in health care affordability and access.
